Art Unit: 2155

## **DETAILED ACTION**

1. This is in response to the Request for Reconsideration filed on 10/9/2003 (paper # 22). Claims 23-31 are presented for examination.

## Claim Rejections - 35 USC ' 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 23-27, 30 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arita U.S Pat. No.5,821,926 in view of Gasperina US pat. No.5,491,781.

As to claim 23, Arita discloses Internet information for receiving Internet information, displaying it on the screen, and display a tool bar composed of plural buttons each representing control function on the screen comprising:

Application/Control Number: 09/393,576

Art Unit: 2155

selecting an arbitrary button (button class of fig.3a) in said toolbar (fig.3a, 3b, co1.10 line 62 to col.12 line 63), magnifying and displaying said selected button (i.e., displaying the button group and the individual buttons as an operating button on a display unit, see abstract, col.11 Lines 15-45, co1.20 line 32 to co1.21 line 65 and co1.15 line 13 to col.16 line 54).

Arita does not specifically disclose magnifying button into a predetermined size in longitudinal and lateral directions. However, Gasperina discloses magnifying button into a predetermined size in longitudinal and lateral directions (see abstract, figs.1A, 1B, col.1 lines 31-60 and col.3 line 6 to col.4 line 65). It would have been obvious to one of the ordinary skill in the art at the time the invention was made to implement Nozawa 's teachings into the computer system of Arita to displaying information because it would have capable correcting reproduced image density automatically in accordance with a density of document ground.

As to claim 24, Arita discloses the state of the selected button is magnified in the direction toward the center of the screen at said step of magnifying and displaying said selected button (see fig.8 and co1.15 Lines 13-56).

As to claim 25, Arita discloses characters for expressing the function of the button are also displayed at said step of magnifying and displaying said selected button (see fig. 27 and co1.17 Lines 1-26 and co1.21 line 5 to co1.22 line 60).

As to claim 26, Arita discloses the step of varying the displaying state of said magnified and displayed button when executing the function of said selected button (see fig. 1, co1.10 Lines 49-60 and col.21 line 5 to co1.22 line 60).

As to claim 27, Arita discloses the button is displayed in the depressed state from the screen at the step of varying the displaying state of said magnified and displayed button when executing

Application/Control Number: 09/393,576

Art Unit: 2155

the function of said selected button (see fig. 10, co1.17 lines 1-26 and co1.25 line 19 to co1.26 line 55).

As to claim 30, Arita discloses an Internet information for receiving Internet information, displaying it on the screen, and display a tool bar composed of plural buttons each representing control function on the screen comprising:
selecting an arbitrary button (button class of fig.3a) in said toolbar (fig.3a, 3b, co1.10 line 62 to

co1.12 line 63) and displaying said selected button in a single user action (i.e., displaying the button group and the individual buttons as an operating button on a display unit, see abstract, co1.11 Lines 15-45, co1.20 line 32 to co1.21 line 65 and co1.15 line 13 to co1.16 line 54).

Arita does not specifically disclose magnifying button into a predetermined size in longitudinal and lateral directions. However, Gasperina discloses magnifying button into a predetermined size in longitudinal and lateral ((see abstract, figs.1A, 1B, co1.1 lines 31-60 and co1.3 line 6 to co1.4 line 65). It would have been obvious to one of the ordinary skill in the art at the time the invention was made to implement Gasperina 's teachings into the computer system of Arita to displaying information because it would have capable correcting reproduced image density automatically in accordance with a density of document ground.

As to claim 31, Arita discloses that the display state of the selected button is magnified and moved in the direction toward the center of the screen (see fig.8 and col.15 Lines 13-56, col.1 line 4 to col.12 line 64 and col.15 line 4 to col.17 line 54).

Application/Control Number: 09/393,576

Art Unit: 2155

4. Claims 28 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arita and Gasperina as in item 3 above and further in view of Schindler et al US pat. No.5,675,390. Arita and Gasperina 's teachings still applied as in item 3 above. Neither Arita nor Gasperina specifically discloses using a wireless remote control to select an arbitrary button. However, wireless remote control is generally well known in the art as disclosed by Schindler (using remote control to control functional buttons and key pads, see abstract, col.13 line 45 to col.14 line 55). It would have been obvious if not inherent to one of the ordinary skill in the art at the time the invention was made to implement a well-known device such as a wireless remote control in the computer system of Arita to control data because it would have enabled users to access and to control data information more quickly.

## Response to Arguments

5. Applicant's arguments with respect to claims 23-31 have been considered but are moot in view of the new ground(s) of rejection.

## Conclusion

- 6. Claims 23-31 are rejected.
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Khanh Dinh whose telephone number is (703) 308-8528. The examiner can normally be reached on Monday through Friday from 8:00 A.m. to 5:00 P.m.

Page 6

Application/Control Number: 09/393,576

Art Unit: 2155

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, ALAM HOSAIN, can be reached on (703) 308-6662. The fax phone number for this group is (703) 746-7239.

A shortened statutory period for reply is set to expire THREE months from the mailing date of this communication. Failure to response within the period for response will cause the application to become abandoned (35 U.S. C. Sect. 133). Extensions of time may be obtained under the provisions of 37 CFR 1.136(A).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 305 -9600.
